# Paper Prototype - Explore Your City Project

Amari Hoogland, Krishna Adettiwar, & Tristan Wagar

Notes from initial meeting:

All team members in attendance on 11/8 at 5pm in the BOLD Center.

Critical Areas:

1) **Map View**
   ○ The map view will serve as a homescreen for the application. Since it is the first interface a user will see, the visual organization of the map view is very important.
2) **Social/Community Feature**
   ○ To best serve the user community using the findings of our research, incorporating a community feature with sharing, commenting, and networking is vital.
3) **Personal Profile**
   ○ The app is dependent on the personalization of events/places to its users, so a profile is necessary for organizing, saving, and suggesting events catered to the identity/preferences of a specific user.

Example/Study Tasks:

1) Using Prototype Version A, navigate between the three tabs. From map -> profile -> social -> map.
2) Using Prototype Version A, navigate to the social page and "Share" Event 1.
3) Using Prototype Version B, navigate to a specific events description.
4) Using Prototype Version C, navigate through event cards and check who is attending.
5) Using Prototype Version C, navigate to your tab in the profile and check your user rating that other people have given to you from events.
